

INFORMATION for washing protective gloves for firefighters (Rev. 2022-11-14)

 **The gloves must not be treated with solvents, bleaches or oxidising agents!**
 This weakens the aramid fibre, destroys laminate bonds and denatures leather. This can damage the gloves. Do not wash gloves together with the rest of the clothing!

 **Spin the gloves only at low speed!**
 To reduce the mechanical stress in the laundry, gloves should be spun at a maximum of between 400 and 600 revolutions.

 **The gloves must not be dried in a tumble dryer!**
 In the tumble dryer, sometimes very high temperatures occur in combination with a very large fulling effect. This can damage the membrane and/or loosen the bond between the NOMEX® fabric and the KEVLAR® fleece. As a result, the stitch tear-out strength at the seams is greatly reduced. Leather becomes hard and brittle in the dryer. In the worst case, the laminate between the lining and the membrane can also come loose due to the fulling effect. This is impossible with proper treatment.

 **Our gloves do not need to be impregnated!**

 **The gloves should be hung on the fingertips to dry!**
 Please put on leather gloves before drying and lightly roll them through by hand and finger movements. This procedure helps to partially restore the leather suppleness.

Description of the care instructions:

1.	2.	3.	4.	5.	6.	7.
						

1. Do not wash!
2. Normal wash cycle at 30 °C, 40 °C, 60 °C – symbol with underscore = use gentle wash cycle!
3. Dry dripping wet - linen drying!
4. Do not tumble dry!
5. Do not iron!
6. Do not bleach!
7. No dry cleaning!

If you follow these instructions, we are sure that you will enjoy your gloves for a long time. Should there still be problems with your gloves, please send them to us free of charge and washed. In case of a justified complaint, we will of course repair or replace the gloves if necessary.
